Progress Monitor — User Guide

Progress Report System for Project Employees

Version 2.0 | 2026

1. What is the Progress Monitor?

The Progress Monitor is a web-based application used by project employees of the Department of Vyakarana to record their daily working hours. It captures your Check-In and Check-Out time along with your physical location, and stores it securely for administrative review.

In addition to progress monitoring, the application now includes a Work Submission feature that allows employees to log the specific work they have completed during their session.

2. What You Need Before Starting

Before using the application, please make sure the following are ready:

- Your Employee ID (provided by the department)
- Your Password (provided by the department)
- A device with internet access (computer, phone, or tablet)
- A supported browser: Google Chrome, Microsoft Edge, or Safari
- Location/GPS enabled on your device

⚠ **Note:** This application does not work without location access. You must allow location permission when prompted by your browser.

3. How to Check In (Start Your Work Session)

Step 1 — Open the Application

Open your browser and go to the Progress Monitor website. You will see the Login screen with two fields: Employee ID and Password.

Step 2 — Enter Your Credentials

Type your Employee ID in the first box and your Password in the second box. Both fields are required. If either is empty, the application will show a warning.

Step 3 — Press Check-In

Click the Check-In button. The application will immediately ask your browser for your current location.

Step 4 — Allow Location Access

Your browser will show a popup asking: "Allow this site to know your location?" Click Allow or Allow While Using the App. Do NOT click Block or Deny.

⚠ **Note:** If you accidentally deny location, the Check-In will not proceed. You will see a message explaining this. Simply press Check-In again and allow location this time.

💡 **Tip:** On mobile, if you see "Allow this time only" or "Allow only while using the app", either option works for Check-In.

Step 5 — Wait for Verification

The button will show "Processing..." for a few seconds while your credentials are verified and your location is recorded. Do not press the button again during this time.

Step 6 — Dashboard Appears

Once verified, your dashboard will appear showing:

- A welcome message with your name
- Your Employee ID, Name, and Email
- Your Check-In location address
- A live Active Time counter showing how long you have been logged in

⚠ **Note:** Your Check-In is now recorded. The system has logged your time and location in the department's records.

4. How to Submit Your Work

After checking in, you can submit a record of the work you completed during your session. This is done using the Submit Work button on your dashboard.

Step 1 — Click "Submit Work"

On your dashboard, click the green "📤 Submit Work" button. A work submission form will slide into view below your dashboard card.

Step 2 — Fill in the Work Details

The form contains the following fields:

Field	What to Enter
Project	Select your assigned project from the dropdown: NLTM, AD-MAHAKOSHA, AD-BGPS, or AD-SAMAYOGI.
Name of Text	Enter the name of the text or kosha you worked on.
Chapter	Enter the chapter number or name relevant to today's work.
Line Numbers	Enter the line numbers or range you worked through (e.g., 1-45).
Description / Comments	Add any additional notes or remarks about the work done.

Step 3 — Press Submit

Click the Submit button. The form will be submitted to the department's records. You will see a confirmation message: "Work submitted successfully!"

After submission, the form will close automatically and the Submit Work button will change to "Submitted" to indicate work has already been logged for this session.

> ⚠ **Note:** Work can only be submitted once per login session. If you need to correct a submission, please contact your administrator.

> 💡 **Tip:** You can submit your work at any point during your session — you do not need to wait until Check-Out.

5. How to Check Out (End Your Work Session)

When you are done working, always press the Check-Out button. Do not simply close the browser tab without checking out.

Step 1 — Press Check-Out

On your dashboard, click the Check-Out button.

Step 2 — Allow Location (If Asked Again)

The application will try to record your current location at checkout. If your browser asks for location permission again, allow it. If you deny it, the system will use your Check-In location as a fallback and still complete the checkout.

Step 3 — Checkout Complete

The dashboard disappears and the Login screen returns. Your Check-Out time and location have been saved.

6. Inactivity Warning and Auto Checkout

The system monitors whether you are actively using your device. If 30 minutes pass with no mouse movement, keyboard input, or screen interaction, the following happens:

- A warning popup appears on screen
- A countdown from 30 seconds begins
- An audio countdown is announced aloud from 10 seconds — you will hear your device speak the numbers 10, 9, 8 … 1
- If you do not respond within 30 seconds, you are automatically checked out

If the popup appears:

Click the Continue button to stay logged in. Your inactivity timer will reset and your session continues normally.

If you are auto-checked out:

The system records the checkout automatically. You will need to Check-In again when you return to work.

Tip: The audio countdown is your last warning. If you hear numbers being announced, return to the app immediately and click Continue.

Note: The Active Time counter on your dashboard shows elapsed time since Check-In. If your device went to sleep or the screen locked, the counter may show less time than actually passed. This is a display issue only — your Check-In and Check-Out times in the system are always accurate.

7. Using the Application on Mobile

The application works on mobile browsers (Chrome for Android, Safari for iOS). Please note the following:

- Enable Location/GPS on your device before opening the app
- When switching to another app or tab, your inactivity timer continues running
- When you return to the app's tab, the timer resets automatically
- If your screen locks while you are checked in, the timer freezes. When you unlock and return, the timer resumes and will count the gap — if it exceeds 30 minutes, the popup appears

Tip: On mobile, always Check-Out manually before locking your screen or leaving for an extended period, rather than relying on auto-checkout.

Tip: If you hear audio numbers counting down on your phone, return to the Progress Monitor tab immediately and tap Continue.

8. Viewing the User Guide

A User Guide button (📘) is visible on the login screen at the bottom-right corner of the page. Hover over it to see the tooltip "View User Guide", then click it to open the guide in a new tab.

Note: The guide button is only visible on the login screen. Once you are checked in, it is hidden from the dashboard.

9. Important Rules and Best Practices

- **Always Check-In at the start of your work and Check-Out when you finish**
- Submit your work using the Submit Work form before checking out
- Do not share your Employee ID or Password with anyone
- Do not Check-In on behalf of another employee
- Always use the Check-Out button instead of just closing the browser
- If you are stepping away for more than 30 minutes, Check-Out first
- Check-In and Check-Out from your actual work location — the system records your GPS coordinates

10. Troubleshooting Common Problems

Problem	What to Do

Check-In button shows Processing... and never completes	Your location was denied or GPS is off. Refresh the page, enable GPS in your device settings, and try again.
"Invalid credentials" message	Double-check your Employee ID and Password. Both are case-sensitive. Contact your administrator if forgotten.
Location permission popup does not appear	Your browser may have already blocked this site. Open browser settings, find Site Permissions, and reset location for this site.
Active Time counter shows incorrect time	This can happen if your device slept while you were checked in. The counter is for display only — your actual Check-In time is correctly recorded.
I was auto-checked out but I was working	If you were on a different tab or your screen locked for 30+ minutes, auto-checkout triggers. Simply Check-In again and inform your administrator if needed.
The app is not loading	Check your internet connection. Try refreshing the page or clearing your browser cache.
Check-Out button is greyed out	You are not currently checked in. The button only activates after a successful Check-In.
Submit Work button shows "Submitted" and won't open again	Work submission is limited to once per login session. If you need to correct or add more work, Check-Out and Check-In again, or contact your administrator.
No sound during the countdown	Your device may be muted or the browser may have blocked speech. Ensure your volume is on and the tab is active. The visual countdown on screen is always shown regardless of audio.
Work form does not appear after clicking Submit Work	Try scrolling down — the form appears below the dashboard card. On mobile, it may open off-screen.

11. Privacy and Data

The Progress Monitor collects the following information each time you Check-In or Check-Out:

- Your Employee ID
- Date and time of Check-In and Check-Out
- Your GPS coordinates (latitude and longitude)
- Your approximate address based on those coordinates

When you submit work, the following additional data is recorded:

- Project name
- Name of text, chapter, and line numbers worked on
- Description or comments entered
- Date and time of submission

All data is used solely for the purpose of progress tracking by the Department of Vyakarana. It is not shared with any third party.
