Progress Monitor — User Guide

Progress Report System for Project Employees

Version 1.0 | 2026

1. What is the Progress Monitor?

The Progress Monitor is a web-based application used by project employees of the Department of Vyakarana to record their daily working hours. It captures your Check-In and Check-Out time along with your physical location, and stores it securely for administrative review.

2. What You Need Before Starting

Before using the application, please make sure the following are ready:

- Your Employee ID (provided by the department)
- Your Password (provided by the department)
- A device with internet access (computer, phone, or tablet)
- A supported browser: Google Chrome, Microsoft Edge, or Safari
- Location/GPS enabled on your device

> ⚠ **Note:** This application does not work without location access. You must allow location permission when prompted by your browser.

---

3. How to Check In (Start Your Work Session)

Step 1 — Open the Application

Open your browser and go to the Attendance Monitor website. You will see the Login screen with two fields: Employee ID and Password.

Step 2 — Enter Your Credentials

Type your Employee ID in the first box and your Password in the second box. Both fields are required. If either is empty, the application will show a warning.

Step 3 — Press Check-In

Click the Check-In button. The application will immediately ask your browser for your current location.

Step 4 — Allow Location Access

Your browser will show a popup asking: "Allow this site to know your location?"

- Click Allow or Allow While Using the App

- Do NOT click Block or Deny

⚠ **Note:** If you accidentally deny location, the Check-In will not proceed. You will see a message explaining this. Simply press Check-In again and allow location this time.

Tip: On mobile, if you see an option for "Allow this time only" or "Allow only while using the app", either option will work for Check-In. However, for Check-Out later in the same session, location should still be available.

Step 5 — Wait for Verification

The button will show "Processing..." for a few seconds while your credentials are verified and your location is recorded. Do not press the button again during this time.

Step 6 — Dashboard Appears

Once verified, your dashboard will appear showing:

- A welcome message with your name
- Your Employee ID, Name, and Email
- Your Check-In location address
- A live Active Time counter showing how long you have been logged in

⚠ **Note:** Your Check-In is now recorded. The system has logged your time and location in the department's records.

---

4. How to Check Out (End Your Work Session)

When you are done working, always press the Check-Out button. Do not simply close the browser tab without checking out — your session will remain open until the auto-logout kicks in.

Step 1 — Press Check-Out

On your dashboard, click the Check-Out button.

Step 2 — Allow Location (If Asked Again)

The application will try to record your current location at the time of checkout. If your browser asks for location permission again, allow it. If you deny it, the system will use your Check-In location as a fallback and still complete the checkout.

Step 3 — Checkout Complete

The dashboard disappears and the Login screen returns. Your Check-Out time and location have been saved. You are done for the session.

---

5. Inactivity Warning and Auto Checkout

The system monitors whether you are actively using your device. If 30 minutes pass with no mouse movement, keyboard input, or screen interaction, the following happens:

- A warning popup appears on screen
- A countdown from 30 seconds begins
- If you do not respond within 30 seconds, you are automatically checked out

If the popup appears:

Click the Continue button to stay logged in. Your inactivity timer will reset and your session continues normally.

If you are auto-checked out:

The system records the checkout automatically. You will need to Check-In again when you return to work.

> ⚠ **Note:** The Active Time counter on your dashboard shows elapsed time since Check-In. However, if your device went to sleep or the screen locked, the counter may show less time than actually passed. This is a display issue only — your Check-In and Check-Out times in the system are always accurate.

---

6. Using the Application on Mobile

The application works on mobile browsers (Chrome for Android, Safari for iOS). Please note the following when using on a phone or tablet:

- Enable Location/GPS on your device before opening the app
- When switching to another app or tab, your inactivity timer continues running
- When you return to the app's tab, the timer resets automatically
- If your screen locks while you are checked in, the timer freezes. When you unlock and return to the tab, the timer resumes and will count the total gap — if it exceeds 30 minutes, the popup appears

Tip: On mobile, always Check-Out manually before locking your screen or leaving for an extended period, rather than relying on auto-checkout.

---

7. Important Rules and Best Practices

- **Always Check-In at the start of your work and Check-Out when you finish**
- Do not share your Employee ID or Password with anyone
- Do not Check-In on behalf of another employee
- Always use the Check-Out button instead of just closing the browser
- If you are stepping away for more than 30 minutes, Check-Out first
- Check-In and Check-Out from your actual work location — the system records your GPS coordinates

---

8. Troubleshooting Common Problems

Problem	What to Do
Check-In button shows Processing... and never completes	Your location was denied or GPS is off. Refresh the page, enable GPS in your device settings, and try again.
"Invalid credentials" message	Double-check your Employee ID and Password. Both are case-sensitive. Contact your administrator if forgotten.
Location permission popup does not appear	Your browser may have already blocked this site. Open browser settings, find Site Permissions, and reset location for this site.
Active Time counter shows incorrect time	This can happen if your device slept while you were checked in. The counter is for display only — your actual Check-In time is correctly recorded.
I was auto-checked out but I was working	If you were on a different tab or your screen locked for 30+ minutes, auto-checkout triggers. Simply Check-In again and inform your administrator if needed.
The app is not loading	Check your internet connection. Try refreshing the page or clearing your browser cache.
Check-Out button is greyed out	You are not currently checked in. The button only activates after a successful Check-In.

---

9. Privacy and Data

The Attendance Monitor collects the following information each time you Check-In or Check-Out:

- Your Employee ID
- Date and time of Check-In and Check-Out
- Your GPS coordinates (latitude and longitude)
- Your approximate address based on those coordinates

This data is used solely for the purpose of attendance and progress tracking by the Department of Vyakarana. It is not shared with any third party.
